USER MANUAL

INTRODUCTION

Thank you for choosing the **Baby R.A.M.** Heritage Audio is dedicated to bringing you ‘the sound of yesterday for tomorrow’. We specialize in capturing that unique, enticing sound that everybody has fallen in love with. For years engineers, producers and musicians have been yearning for that classic vibe. Usually the only option is to search for old, used original equipment that is almost always in a questionable state of operation. This brings with it a whole lot of other issues, making the experience less than desirable. Not to mention the very high prices asked for this equipment, which makes them virtually unobtainable for the great majority. Now it’s possible to obtain that same sound with a brand new piece that will give you all the problem-free, heavy-duty use you’ll need for years of music making history.

DESCRIPTION

Heritage Audio's Baby RAM is the ultimate passive-monitoring system, delivering the most transparent signal with the best stereo imaging of any other passive designs available!

The Baby RAM is a boutique, passive-circuit monitor controller inspired by classic European console designs. A Baby RAM is the ultimate controller for total transparency — a zero-compromise signal path, paired with a simplified control set ensures your monitors receive the cleanest, purest signal possible without unnecessary complications.

The Baby RAM proudly features a 4 gang, 24 step rotary switch for volume as opposed to cheaper stereo potentiometers, which means the precision of your stereo signal is perfect on every position as well as offering a sub-tenth of a dB precision on every single attenuation position! Baby RAM also has no insertion loss, meaning that there's no extra coloration, signal loss or degradation at any settings.

Even though the Baby RAM packs a zero-compromise circuit design, it couldn't be any easier to use with 2 pairs of stereo inputs and outputs — both balanced and ground free (unbalanced compatible) on gold plated TRS jacks. Mute, Dim, Mono, and Volume monitoring controls make the Baby RAM a breeze to work with. And with it's passive design, it also means you have no concerns with bad power supplies, as no electrical current is needed!

The Baby RAM is built with the most cutting edge methods in manufacturing and design, without ever compromising audio quality or cutting corners.

GETTING STARTED

FRONT

1	2	3	4	5	6
OUTPUT Selects either Output 1 or Output 2	ATTENUATOR Steps through the volume range in 3 dB increments	MONO SWITCH Collapses the signal from Stereo to Mono	INPUT Selects either Input 1 or Input 2	DIM SWITCH Reduces output by -20 dB	MUTE SWITCH Completely eliminates the output

REAR

1	2	3
INPUTS 1/4 TRS Jacks	OUTPUTS 1/4 TRS Jacks	BAL. & FLOAT / UNBAL. Lifts the ground on the output signal for better Unbalanced compatibility

2 IN/2 OUT
MONITORING

ACTIVE SPEAKER 1-L

PASSIVE SPEAKER 2-L

PASSIVE SPEAKER 2-R

ACTIVE SPEAKER 1-R

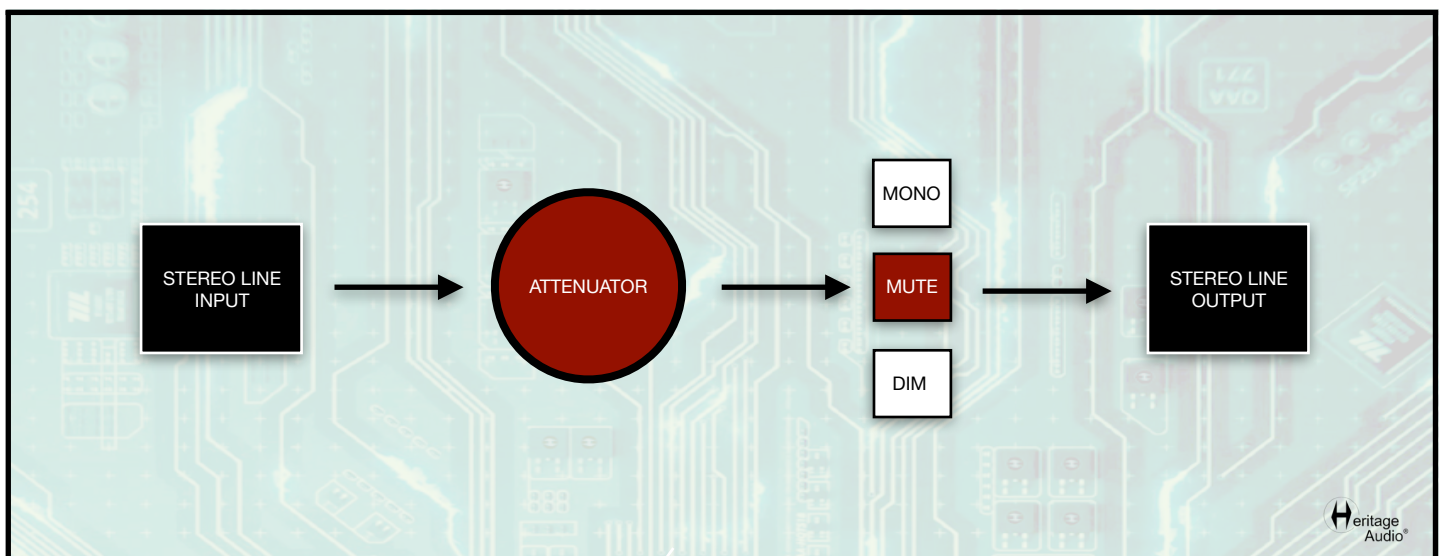

SPECIFICATIONS

- **Unlimited Headroom:** Being a passive device, it is only limited by the preceding and following devices' headroom.
- **Balanced and floating inputs and outputs:** Inputs and Outputs TRS JACKs, unbalanced compatible.
- **24 Step Passive Attenuator:** In 3 dB steps for sub-tenth dB precision between left and right channels.
- **Mute:** Less than 100 dBu.
- **No added distortion or noise.**
- **Insertion loss:** Less than 0,2 dB.
- **Dimensions (W x H x L):** 142 mm x 85 mm x 192 mm.

SIGNAL FLOW

TROUBLE SHOOTING

PROBLEMS	SOLUTIONS
There is no sound coming from my Baby RAM.	Make sure the 'MUTE' button is not pressed.
The audio from my Baby RAM seems less open than the audio directly from my DAW.	Double check that you have not accidentally pressed the 'MONO' button.
Even with the volume knob all the way up it doesn't seem to output as much as before.	You may have the 'DIM' button pushed, reducing the output by -20 dB.
There is no signal present at the Baby RAM's Output.	Verify that you have correctly connected the Input and Output cables.
There seems to be lots of extra noise coming from the unit.	Try pressing the white 'Unbal' button on the rear panel.
Is it possible to have both outputs or both inputs active at the same time?	No, you can only use one Input and one Output at any given time.

WARRANTY STATEMENT

LIMITED 2 YEAR WARRANTY

Heritage Audio **Baby R.A.M** is warranted by Heritage Audio SL to be free from defects in materials and workmanship for the period of 2 years to the original purchaser. In the event of such defects, the product will be repaired without charge or, at our option, replaced with a new one if delivered to Heritage Audio prepaid, together with a copy of the sales slip or other proof of purchase date. The warranty excludes problems due to normal wear, abuse, shipping damage or failure to use the product in accordance with the specifications.

Heritage Audio shall not be liable for damages based upon inconvenience, loss of use of the product, loss of time, interrupted operation or commercial loss or any other damages, whether incidental, consequential or otherwise.

This warranty is not transferable.

Heritage Audio and the Heritage Audio “H” logos are registered Trademarks owned and/or licensed by Heritage Audio.
